As a German manufacturer of braided and monofilament fishing lines we draw on over 60 years of experience in the development and production of fishing lines and fibres. Since the introduction of modern technology fishing lines, made of synthetic fibres since the late 1940s, we have invested our passion, creativity and knowledge into every new product. We were not only one of the first companies in Europe to make monofilament fishing lines, but in the early 1990s as the first supplier of braided fishing lines we laid the foundation for the overwhelming triumph of this new fishing line technology.

Today, anglers expect a lot more from their fishing lines. The differences between products are often minimal, but for a specialist fishing technique they can be a great

advantage. On the following pages we would like to show you our product range, shed some light on the fishing line ‘jungle’, and help you with CLIMAX lines to get a little closer to your dream fish.

A fishing line is braided from at least three, and up to eight or 16 fibres. Only synthetic fibres are used, and depending on the required properties, are combined with each other – even with wire. Essentially, three factors influence the characteristics of a braided fishing line: the base fibre, the braiding, and the finishing/surface treatment. These determine the fishing environment, strength and suppleness of the line as well as the durability, abrasion resistance and of course the price.

## Abrasion Resistance

An unsealed Dyneema® braided line is strong, but quickly opens up its weaves with wear. All of our braided lines are sealed and therefore are much more resistant to abrasion. In addition, a method has been developed which increases the abrasion resistance of the best sealed lines approximately five-fold. The lines treated in this way have been setting the standard throughout the market place for many years for catfish or carp rigs.

## Stretch or Elasticity

Most braided lines have very low stretch of between 1% and 8% allowing unique and direct control and contact to your bait. Just for predator fishing with modern methods, such as drop shot fishing, a well braided line is without doubt the best line to use. An important issue to consider however is that a low-stretch-line means a much higher load on the unit, because each strike goes directly through the rod and reel. It means that with braided lines it is particularly important to correctly set the reel brake. Our tip: Because of its low stretch, a braided fishing line is not always the appropriate choice for every angling method. Every ordinary fishing reel now has a spare spool, so we recommend filling one spool with a braid and the other one with a monofilament, so that you are perfectly prepared for every situation.

## Diameter

A precise determination of the diameter of a braided line is almost impossible. This is because, despite its precise weave and special stretching, it deforms during measuring with a micrometer, while measurement of the often ‘non-round’ body using a laser is inaccurate. It is therefore common to show arithmetical approximations on the label for the diameter. For this reason we recommend you buy your braided line according to the breaking strain and do not be fooled by non-verifiable diameter information.

## Dyneema® Fibres

We use 100% Dyneema® fibres as the basic fibres in all major fishing lines. Weight for weight, this high-strength polyethylene fibre from the Dutch chemicals group DSM has 15 times more tensile strength than steel. With a density of 0.95 to 0.97 g/cm³ it is lighter than water and always buoyant.

## Colour

In the manufacture of a monofilament fishing line, colour pigments are usually added to the plastic granules – these lines are coloured through out, and therefore have almost no colour run. It is different for braided lines. The Dyneema® fibre itself is pure white and very chemically resistant.

The surface of this fibre does not absorb any colour. The colouring process is thus accomplished by ‘attaching’ the pigments to the surface of the line, and over time this can fade out. Each fisherman has had his own experiences with fishing line colours.

There are species of fish, like salmon, which are more sensitive and other species, such as most cyprinids, which are less responsive to colour. Climax braids are always available in both bright colours and camouflage, so that you are properly prepared for every kind of angling.

## Braiding

Basically, we distinguish between two types of weave – round or symmetrical, and oval or asymmetrical. Also, the closeness of the weave, ie. the number of knots per cm, plays an important role. Climax fishing lines are braided in an extremely stable and precise manner to make them highly reliable.

# „Braided Lines“

climax

The quality of the weave also affects the price, because a close weave requires a slower machine braiding speed. Currently the new 8-braided TOUCH sets the benchmark for braids – it is perfectly smooth, round and feels very supple.

## Knots & knot strength

What use is the best line when the knot rises or even tears? Climax braids are specially treated so that each knot has a strength of 70% to 90%. Especially strong stretched, fused and heat sealed lines often have a much smaller knot strength. Here are a few knots for braided lines that we can recommend:

your line. If there are signs of a roughened surface and torn individual threads, cut off the damaged piece and replace your rig.

## Splicing

Thanks to the technique of splicing, especially hollow braids (eg lead core) can be provided with knotless and flexible loops. The loose end of line is placed here for looping and pulled into the interior of the line. On the production line, the braid pulls itself together and clutches itself so tightly that the loop can no longer open. See figure.

## Breaking strain

The breaking strain specified on the label should help the angler to compare different lines with regard to the line diameter and select the right product

## Care

After prolonged use and especially when fishing in salt water, it is advisable to rinse the line with tap water. After drying, you can treat your braid with a fishing line care product. For this we offer CLIMAX Soft and Protector for cleaning & protecting. This cleans even the smallest dirt particles and covers your line with an effective protective, non-greasy film.

Note: Check regularly the first 20 metres of

for himself. To this end, fishing lines of all manufacturers are always tested for their breaking strain under the same laboratory conditions. Unfortunately, not all manufacturers adhere to these practices and mislead the buyer with some extremely 'embellished' breaking strain

information. The linear breaking strain of a line measures the tensile strength without knots. Braided Dyneema® lines have a significantly higher linear breaking strain than monofilament. On the other hand, the knot strength of a braid lies partially below 70% of the linear stability, while a monofilament value can reach up to 99% in the knot.

## Sealing

After precise braiding, the surface treatment is above all the most important factor in producing a well braided fishing line. The refining process is probably the best kept secret of each braiding factory. Without giving details, we differ in the production of three major refining

processes: stretching, thermo-fixation and sealing. Together, these procedures provide for the excellent casting characteristics, knot strength and abrasion resistance of Climax lines.

## State-of-the-Art fishing braid – Excellence for your success!

The brand new TOUCH 8-Braid:  
By the first touch this phenomenal  
8-fibre braid will fascinate you  
and not let you go!

This is what makes this line so  
much better than other braids:

- Straight 8-fibre braid in ultimate perfection and roundness
- Most supple surface ever enables incredible casting
- Noiseless and frictionless – the new Hi-Tech finish makes your TOUCH fly through the guides
- Lowest possible stretch
- Direct contact
- Available in three colors

Ø	0,12	0,14	0,16	0,18	0,20
kg	9,2	11,3	14,2	16,6	19,0

Ø	0,22	0,25	0,28	0,30
kg	21,5	24,0	26,8	29,5

## TOUCH DOWN – fast sinking braid!

The clever braid „made in Germany“ – fast sinking and a smart rating scale. Dyneema® and extra heavy Downtex fibres are blended using a special process to create this brand new braided line. TOUCH DOWN braid is extremely abrasion resistant, features very high knot strength and, thanks to its chromatic scale, provides precise information on casting distance or water depth.

Benefits include:

- TOUCH DOWN's sink-rate of 5m/min!!! 3 times faster than other sinking braids and 2 times faster than Fluorocarbon
- 5-colour chromatic scale: easy and precise rating of casting distance and water depth.

- Besides their heavy weight, the new Downtex fibres also feature abrasion resistance, suppleness and good knots for increased casting distance, less wear and less failure.

Climax TOUCH DOWN, a touchdown for ambitious carp and feeder anglers!

## Peak performance made in Germany meant for fishing maniacs!

- Pure Dyneema® fibres & micro braiding for extremely high breaking strain and knot strength
- Thermofixation for improved castability, durability and a super supple surface
- Polysiloxane sealing for max. abrasion resistance and protection from dirt-infiltration, salt and UV-rays

### 100% HMPE fibre

All Flash Braids are made in Germany using the newly-developed, high molecular PE fiber and conform to highest quality standards.

- Slides almost frictionless through guides → excellent casting
- Round braid, up to 8 strands
- High breaking strength, especially on the knot
- Highest abrasion resistance due to PTFE-surface treatment
- Fiber impregnation protects against salt and dirt infiltration → excellent use for sea-fishing in diameters up to 0,80mm!

## High-Tech made of carbon, hydrogen & air

Monofilament fishing lines are made from polyamide (nylon) pellets, which are liquefied in an extruder and subsequently pressed through fine holes in a spinning nozzle under high pressure. After cooling in a water bath, these threads are expanded by a multiple of their initial length until they are stretched to their final diameter. Depending upon line quality, the threads are put through various immersion baths to receive special coatings for more surface hardness, UV-protection etc. Thanks to the ability to add additives like colour pigments and plasticizers, co-polymers can be manufactured in different colours and with different attributes. The advantages of these lines are obvious: they have a controlled stretch, the line surface is very smooth and there are many colour variations ranging from transparent to opaque black. The price of a monofilament fishing line is significantly less than for a braided line. The diameter is more accurately calibrated, and the knot strength in relation to breaking strain is very good.

## Abrasion resistance

If you take into account the load on a line due to friction in the rings, obstacles or fish teeth, the importance of this property is readily apparent. By special processing and coating, it is possible for us to increase the abrasion resistance by up to 12-fold and thus produce bespoke lines for specific requirements.

One special form is Climax HardMono and Fluorocarbon: In both cases we use a fundamentally harder and denser raw material and thereby achieve – in addition to

other specific properties of these products – a much higher abrasion resistance than with conventional polyamide monofilament. Stretching: The stretching of a line plays an essential role in many fishing situations. Basically, a monofilament line has a stretch of between 15% and 35%, whereby the lesser stretch is typical particularly for fluorocarbon lines and the rather longer stretch of smooth co-polymers, which are used in particular for carp lines. More stretch has the effect of being springy during the play, protects the knots and prevents the hook from sliding off. In addition, an elastic line protects your fishing tackle, since the strike and play do not impact so directly on rod and reel. Too much stretch however also makes accurate ground baiting more difficult, gives you less control during the play and can considerably weaken a powerful strike.

## Label

Eye up your purchase. Do not believe everything that a new wonder line promises and instead check out the critical diameter and breaking strain information. Unfortunately they are still very much exaggerated, often far beyond the technically feasible limits. For years CLIMAX has been working actively with other manufacturers on a European solution to this false labeling and is amongst some of the first signatories of the EFTTA Line Charter which is addressing this problem.

Tip: 3.5kg to 4kg breaking load with 0.20 mm diameter is regarded as a reliable reference for a very, very good monofilament line. Significantly higher data suggest mis-labelling. If you want to find out more, visit the EFTTA website ([www.eftta.com](http://www.eftta.com)) on which regularly conducted laboratory tests results and 'black sheep' are published.

## Colour

A monofilament fishing line is usually dyed. This means that colour pigment is pre-mixed in with the plastic granulate and these lines are almost non-fade. It is different for braided lines (see p.2). The colours of our monofilament lines are individually tailored and optimised to target certain types of angling and in certain cases, specific fish.

## Fluorocarbon

All Climax fluorocarbon lines are 100% fluorocarbon. Unlike conventional nylon monofilaments, fluorocarbon is very heavy, so these lines sink quickly. In addition, fluorocarbon does not absorb water, which means the breaking strain and elasticity are not altered, even after long use in the water. The material is extremely resistant to abrasion and its refraction index is extremely close to that of water,

whereby the line itself is very difficult to see for fish with good vision. For these reasons fluorocarbon is a popular choice for predatory fish.

## Knots & knot strength

What use is the best fishing line when the knot rises or even tears? Depending on the raw material, the processing, and of course depending on the knots, a monofilament has a knot strength of 75% to 99%. The harder fluorocarbon reaches a knot strength of 60% to 80%. Generally speaking, the greater the stretch and flexibility of the line, the greater the knot strength..

Our tip: The hard fluorocarbon can literally squeeze and finally cut the much softer Co-polymer. Therefore, we recommend the use of a swivel when connecting these different materials with each other.

## Memory

This refers to the 'memory' of monofilament lines at the time of being on a spool. If the line curls strongly during unwinding, then it has a lot of 'memory'. The longer the line is on a spool, the more it will curl – dryness and high temperatures enhance this effect. Due to a special treatment directly after extrusion, we at Climax reduce this effect as much as possible. However the memory cannot be

completely eliminated since other properties of the line greatly suffer. Soft stretch lines with more stretch generally have less memory.

## Breaking strain

The breaking strain specified on the label should help the angler to compare different lines with regard to the line diameter, and select the right product for himself. To this end, fishing lines of all manufacturers are always tested for their breaking strain under the same laboratory conditions. Unfortunately, not all manufacturers adhere to these practices and they mislead the buyer with some extremely 'embellished' breaking strain information. The linear breaking strain of a line measures the tensile strength without knots.

The European Federation of the Fishing Industry gives a kind of ISO certificate for the authenticity of the technical details for fishing lines. Such a certificate is available on many of our monofilament labels.

# Max Mono

## MAX Quality

For 100%, the new Climax **MAX** mono is made of a supreme multi-polymer, which is made exclusively for Climax.

## MAX Control

This special monofilament has a very low stretch of below 20%. Normal lines have approx. 28%. The **MAX** mono allows a maximum of control over bait and fish.

## MAX Strength

Linear strength as well as knot strength of **MAX** mono are superb and, as all Climax lines, continuously tested and confirmed in the lab.

## MAX Reliability

The **MAX** mono is extremely consistant and reliable with lowest tolerances. Every inch is equally strong, thin and round.

## MAX Resistance

A special surface treatment makes the line cast easily and silently through the line guides. On top, the line is very abrasion resistant.

## MAX ICE

Climax' innovative additive perfectly protects this mono from icing. Failure caused by extremely cold water temperatures in toughest conditions have effectively been reduced – there is no better mono in cold water.

# Select Lines – Monofilament

**climax**

These top lines are the best of the best and were developed for the angler who places the highest production quality and merciless reliability above all else and would not mind paying a bit more for this.

## CLIMAX SELECT SPIN

This line's focus was to improve castability and direct bait control. Thanks to precise stretching and a high-quality, sealing the line features a super smooth surface, very low memory without being hard and finally casts further than other products. Its low elasticity offers direct bait contact. Suitable for fresh and salt water. Color: light green

Ø	0,08	0,10	0,12	0,14	0,16
kg	0,6	1,0	1,5	2,0	2,6

Ø	0,47	0,52			
kg	19,0	22,0			

## CLIMAX SELECT MATCH

The molecular sealing of the high-quality nylon and multiple stretching give this line an impressive breaking strain and knot strength, even with the thinnest diameters. The fluorine surface treatment prevents additional water absorption. The breaking strain remains even after hours of fishing. Elasticity is coordinated to use in match fishing. Color: water-green

Ø	0,08	0,10	0,12	0,14	0,16

Ø	0,18	0,20	0,22	0,25	0,28
kg	3,0	4,0	5,0	6,0	6,8

## CLIMAX SELECT FLUOROCARBON

SELECT FLUOROCARBON has mastered a weakness that plagues most other fluorocarbon lines on the market: it has particularly high knot strength of about 80% and a suppleness that results in perfect casts and bait presentation. This is a very special line. Whether you are fishing in crystal clear water or stalking the most timid of fish, SELECT is the right choice. It has a similar rate of refraction to water so is practically invisible to fish, which dramatically increases your chances of success. Color: transparent

Ø	0,13	0,15	0,17	0,18	0,20
kg	1,5	1,9	2,4	2,8	3,4

kg	3,9	4,7	5,0	5,9	6,8
Ø	0,33	0,36			
kg	7,5	9,4			

## CLIMAX SELECT HIGH TEC

This exceptional line is the best choice for the highest handling demands and maximum security in fresh and salt water and for all kinds of fish. The high-quality nylon is molecular sealed and stretched multiple times, so that breaking strain, knot strength, memory elasticity and abrasion resistance are united in the best possible combination and will not be outdone by any other monofilament. Color: turquoise blue

Ø	0,16	0,18	0,20	0,22	0,24
kg	2,6	3,0	3,8	4,1	4,5

Ø	0,45	0,50	0,60	0,70	
kg	14,0	16,0	23,0	29,0	

# Speci-Fish Lines

We have put a lot of time, effort and testing into the CLIMAX range of target species fishing lines. The results are clearly visible; a range of premium lines with high breaking strains that keep their promise! These lines are not just the right colour for the fish you're targeting. The elasticity, hardness and abrasion resistance have been finely balanced to suit the application, tackle and method required by the individual species. CLIMAX lines provide unbeatable quality and price.

## CLIMAX EEL

- especially abrasion resistant
- camouflage effect through dark colour

Color: brown

Ø	0,30	0,35			
kg	7,9	10,2			
m	400	300			

## CLIMAX CODFISH

- low elongation for heavy lures/baits
- high visibility for controlled fishing

Color: yellow

Ø	0,40	0,50			
kg	12,2	17,3			
m	250	200			

## CLIMAX PIKE

- excellent knot strength
- low elongation for better contact to lure and fish

Color: grey

Ø	0,30	0,35	0,40		
kg	7,9	10,2	12,2		
m	400	300	250

kg	3,0	3,7	4,3	5,6
m	500	500	500	400

# Special Lines – Monofilament

## Specialists accomplish more!

With this in mind we have put together a program of special fishing lines, which are very unique on the fishing line market.

As innovative line developers, we have utilized every possible material combinations and refinements, in order to create a truly unique line from each of their attributes.

### CLIMAX SPECIAL SYNERGY

This innovative fishing line unites the best attributes of two proven materials: The strength of the nylon core lies in its high breaking strain and knot strength, the fluorocarbon mantel is water-proof and seals the line core. Synergy utilizes innovative manufacturing technology as well as modern materials for the angler like no other line. Color: lightgrey, orange

#### lightgrey

Ø	0,18	0,20	0,22	0,25	0,28
kg	3,4	4,0	4,4	5,8	6,8
Ø	0,30	0,33	0,37	0,40	0,50
kg	8,3	9,3	11,5	13,0	18,0

#### orange

Ø	0,18	0,20	0,22	0,25	0,28
kg	3,0	3,5	4,0	5,6	6,1
Ø	0,30	0,33	0,37	0,40	0,50
kg	7,5	8,6	10,5	11,0	18,0

### CLIMAX SPECIAL ANTI TWIST

This line with minimum memory is the ideal solution for every angler when it comes to pin-point casting and variable bait control.

The suppleness of this line prevents line twisting and memory. Because of its controlled elasticity bait and fish can be handled very sensitive and in all promising manners. Because of its surface coating it is perfectly suitable in fresh and salt water.

Color: steelgrey

Ø	0,22	0,24	0,26	0,30	0,33
kg	3,6	4,2	5,2	7,2	8,3
Ø	0,37	0,40			
kg	10,0	11,3			

### CLIMAX SPECIAL PROTECTOR

This monofilament sets a new standard for abrasion resistance and long-life.

Thanks to a special combination of raw material and multiple stretching, it is resistant to external influences like rock, mussels, sunken trees and limbs. It is 8 times more abrasion resistant than a normal nylon line! Its protection works from the inside out and remains constantly intact. It is the best choice for every bottom and saltwater angler who want a long-lasting and reliable fishing line. Color: silver

Ø	0,20	0,25	0,30	0,35	0,40
kg	3,4	4,9	6,7	8,8	11,2
Ø	0,45				
kg	13,3				

# Soft & Strong Lines – Monofilament

**climax**

The most solid and reliable fresh and salt water lines can be found in this program. They reflect over 50 years of experience with fishing line and are available at superb prices.

## CLIMAX Soft & Strong

is successfully used by anglers between Alaska, Patagonia and Australia, from the Caribbean through Europe all the way into Mongolia.

### CLIMAX SOFT & STRONG

This all-round line combines strength, suppleness and elasticity in a very well-balanced combination.

It definitely is the right choice for anglers who want to cover all the areas of their passion with a really good line.

#### Attributes:

- Good breaking strain and knot strength
- Suitable for fresh and salt water
- Transparent, nearly invisible in water

Color: white, blue, green, grey, brown, pink, rainbow

Ø	0,15	0,20	0,25	0,30	0,35
kg	1,6	2,8	4,2	5,7	7,2
Ø	0,40	0,45	0,50	0,55	0,60
kg	10,2	12,0	14,5	17,3	19,5
Ø	0,70	0,80	0,90	1,00	1,10
kg	25,0	33,0	38,0	46,0	55,0
Ø	1,20	1,30	1,40	1,50	1,60
kg	65,0	70,0	80,0	90,0	96,0
Ø	1,80	2,00			
kg	110,0	125,0			

### CLIMAX SOFT PLUS

The perfect line for anglers who appreciate a soft line with little memory and higher elasticity absorbing heavy strokes of a fighting fish.

In close and middle distances this line is ideal for delicate fishing for fresh water as well as sea fish in all sizes.

#### Attributes:

- High suppleness
- Lower memory effect
- Very good sensibility

Color: light blue, transparent, his-vis yellow

Ø	0,15	0,18	0,20	0,22	0,25
kg	2,2	2,8	3,5	4,3	5,0
Ø	0,30	0,35	0,40	0,45	0,50
kg	7,2	9,1	11,5	14,3	17,0
Ø	0,60	0,70			
kg	20,0	24,0			

### CLIMAX SALTWATER

CLIMAX SALTWATER is a hard, abrasion resistant fishing line that sea anglers will find ideal for boat and beach fishing.

The special surface guards against abrasion and its toughness prevents salt crystal damage.

#### Attributes:

- Particularly resistant to UV rays
- High abrasion resistance
- Hard surface that resists salt crystals

Color: orange, yellow, blue, transparent

Ø	0,25	0,28	0,30	0,35	0,40
kg	5,0	6,2	7,0	9,0	11,8
Ø	0,50	0,60	0,70		
kg	17,4	21,3	27,8		

### CLIMAX FLUOROCARBON

We give the angler the possibility to catch tricky fish in over fished or cristal clear water with this special line.

Fluorocarbon refracts light in a similar way as water and is therefore almost invisible to fish.

It quickly breaks through the surface tension, because it is heavier than water, and floats inconspicuously under the surface. Since this line is water proof, the breaking strain remains at 100% even when wet for hours.

#### Attributes:

- Waterproof and UV-resistant
- Sinking (3 times heavier than nylon)
- Invisible under water
- High abrasion resistance

Color: transparent

Ø	0,10	0,12	0,14	0,16	0,18
kg	0,8	1,0	1,7	2,3	2,6

Ø	0,60	0,70	0,80	0,90	1,00
kg	16,0	20,0	24,0	30,0	40,0

## CLIMAX STRONG PLUS

Thanks to its low elasticity and high breaking strain, this line conveys direct bait contact, even over a wider distance. The hook can be set very quickly. It is very well protected against abrasion, thanks to its hard surface.

#### Attributes:

- Very high breaking strain and knot strength
- Low elasticity for direct bait control
- Abrasion resistant
- Ideal for fresh and salt water fishing
- Color: transparent

Ø	0,12	0,14	0,16	0,18	0,20

kg	14,0	17,0	21,0		

## SNATCH

The Climax SNATCH product range for predatory fish has been completely redeveloped in close co-operation with our predator experts. We have used only the highest quality materials for the range, which covers a broad spectrum, starting from complete, ready-to-use natural baits through to Fireball rigs and complete assembled rigs. All leader materials are also available by the metre, including crimp sleeves that allow anglers to put together their own rigs. The range has all the tried and trusted quality the market has come to expect from Germany's top rig specialist.

### SEA-JIG

This rig is ideal for presenting a dead bait close to the bottom when drift fishing from a boat. The Climax Cult Catfish braid has very high abrasion resistance and is armed with VMC treble hooks for extra security when tackling powerful predators. With a 0.92mm diameter and 80kg breaking strain, it is suitable for both sea and freshwater fishing. Contents: 1 unit. Length 25 cm.

g	150	190	230
Hook	3/0	4/0	4/0

### FIREBALL CATFISH RIG

Designed specifically with catfish in mind, the Fireball is perfect for vertical fishing of a dead bait or rubber fish close to the bottom where catfish lurk. The Climax Cult Catfish braid has proven abrasion resistance and the two VMC treble hooks provide extra assurance against losing big fish.

Contents 1 unit. Length 25 cm.

Heads with 30g+ 60g are with 7x7 steel and triple hook  
(load capacity: 5kg / 10kg)

g	30	60	90	150	190	230
Hook	4	2	2/0	3/0	4/0	4/0

### HARDMONO HOOK LEADER

- A natural bait rig made from HARD MONO material
- Special coating resists the sharpest predator teeth
- Five times more hardwearing than conventional nylon
- Ultra-transparent, making it almost invisible to fish
- Perfectly suited for fresh water as well as saltwater

kg	5	10	14	20
Hook	4	1	1/0	1/0
cm	60	60	60	60

### FLUOROCARBON HOOK LEADER

- Natural bait rig made of 100% fluoro carbon
- Almost invisible under water
- Extremely smooth and wear-resistant surface
- Enormously strong, even under sustained loading
- Resistant to heat and cold

kg	5	10	14	20
Hook	4	1	1/0	1/0
cm	60	60	60	60

SNATCH Hook Leaders are made from tried and trusted Climax materials and are combined with tough, ultra sharp treble hooks made by VMC. All crimp sleeves are pressed with five pressure points for extra reliability.

### TITANFLEX LEADER

- The perfect predator rig for natural baits
- Twists and tangles reduced to a minimum
- Service life many times greater than steel
- Extremely flexible and hard wearing with enormous load capacity
- Can be used in saltwater or freshwater

kg	4	6	8	10	14
Hook	4	4	2	1	1/0
cm	50	50	50	50	50

### FLEXSTEEL HOOK LEADER (7x7/1x19)

- Natural bait rig made from stainless steel 7x7 or 1x19
- Non-reflective surface
- Extraordinarily supple, yet has high abrasion-resistance
- Excellent load capacity

kg	5	10	15	20
Hook	4	1	1/0	2/0
cm	60	60	60	60

# SNATCH Predator Lines

Only the finest quality Climax materials are used for the SNATCH Vorfach Leader and the Hook Leaders. A strong swivel and cross-lock snap for the treble hook provide added security.

## FLEXISTEEL LEADER 7 x 7

- Forty nine (7x7) ultra-fine, close-braided steel threads
- Non-reflective surface
- Extraordinarily wear-resistant and highly supple
- Excellent load capacity
- Perfectly suited for freshwater as well as saltwater

kg	5	10	15	20
cm	60	60	60	60

## FLEXISTEEL LEADER 1 x 19

- Nineteen (1x19) ultra-fine, closely-braided steel threads
- Non-reflective surface
- Extraordinarily wear-resistant and very supple
- Excellent load capacity
- Perfectly suited for freshwater as well as saltwater

kg	5	10	15	20
cm	60	60	60	60

## TITANFLEX 1 x 7

- Seven ultra-fine, closely braided titanium threads
- Super flexible
- Enormous load capacity and wear resistance
- Twists and tangles reduced to a minimum
- Service life many times greater than steel

kg	4	6	8	10	14
cm	50	50	50	50	50

## FLUOROCARBON LEADER

- 100% fluorocarbon
- Almost invisible to fish
- Extremely smooth and wear-resistant surface
- Enormously strong, even under sustained loading
- Resistant to heat and cold.

kg	5	10	14	20
cm	60	60	60	60

## HARD MONO LEADER

- The perfect alternative to steel
- Special surface resists the sharpest teeth
- Five times more wear-resistant than conventional nylon
- Ultra-transparent, making it almost invisible to fish
- Perfectly suited for freshwater as well as saltwater

kg	4,5	9,1	13,6	18,1	23
cm	60	60	60	60	60

#### FLUOROCARBON LEADER

- 100% fluorocarbon
- Almost invisible to fish
- Extremely smooth and wear-resistant surface
- Enormously tough, even under sustained loading
- Resistant to heat and cold

Ø	0,30	0,40	0,50	0,70
kg	5	10	14	20
m	10	10	10	10

#### HARD MONO LEADER

- The perfect alternative to steel
- Special structure of the surface resists the sharpest teeth
- Five times more wear-resistant than conventional nylon
- Ultra-transparent, making it almost invisible to fish
- Perfectly suited for freshwater as well as saltwater

kg	4,5	9,1	13,6	18,1	23
m	10	10	10	10	10

#### TOOTHY CRITTER

- Nineteen ultra-fine, closely-braided steel threads
- Highly supple
- Incredibly wear resistant
- Can be knotted
- Can also be welded with the careful application of heat

kg	5	7,5	10	17,5
m	5	5	13,6	18,1

#### TITANFLEX LEADER 1 x 7

- Seven ultra-fine, closely-braided steel threads
- Super flexible
- Great load capacity and wear resistance
- Twists and tangles reduced to a minimum
- Service life many times greater than steel

kg	4	6	8	10	14
m	3	3	3	3	3

#### TITANFLEX SINGLE STRAND

- Super flexible
- Enormous load capacity and wear resistance
- Twists and tangles reduced to a minimum
- Service life many times greater than steel

kg	4	6	8,5	13
m	3	3	3	3

Do it yourself .....

Our SNATCH LEADERS come in spools for making individual rigs. All the spools come with a small box of suitable crimp sleeves.

#### FLEXISTEEL 7x7

- Fortynine(7x7) ultra-fine, closely-braided steel threads
- Non-reflective surface
- Extraordinarily wear-resistant and highly supple
- Excellent load capacity
- Perfectly suited for fresh water as well as saltwater

kg	5	10	15	20
m	5	5	5	5

A system to success – You find everything necessary for successful carp fishing. The perfect carp line, innovative leader materials for all different sorts of applications, proven “ready-made-rigs” as well as tools.

## CULT DURAMAX MONOSHELL

The innovative new eight-carrier braided carp line from Climax. Thanks to the cruciform braided and highly wear-resistant fluorocarbon threads, a MonoShell structure is created which provides consistent protection against wear. The line's suppleness and circular cross-section allow it to slide through the ring without resistance, resulting in longer casts.

## CULT FLUOROCARBON

Just for mainline or rig making the brand new CULT Fluorocarbon is without doubt the ideal line to use. Unlike conventional Fluorocarbons on the market, it is very supple and has low memory. Cult Fluorocarbon consequently casts further and performs better knot strength than others. Thanks to an extremely high density this line quickly sinks the ground and with its discreet shade of olive it perfectly blends into the lake bed.

## CAMOU MASK

Our newly-developed, sinking, four-carrier braided carp line with a top price-to-performance ratio. Thanks to the tight braid, the line has a round, supple surface, while a special fibre-sealing technique prevents the absorption of water and gives the line excellent resistance to wear. The subtle camouflage colour perfectly masks the line on the bottom.

### CULT Carp-Line

Best available raw materials for stability and increased life span. Specially formulated surface for extra abrasion resistance and cast ability. Unidirectional molecule structure for maximum breaking strain and controlled elasticity. Polymer additives for perfect suppleness and lowest possible memory. Linked molecules increased for up to 90% stronger knots. Computer controlled line diameter, density for consistent breaking strain and maximum reliability. Color: black

### CULT Extreme

The perfect mainline for extreme situations that demand everything from your tackle. This handy and super supple line has got nothing in common with what you know about carp lines until today. A process in production adds incredible abrasion resistance exceeding other monofilaments by up to 12 times. Memory does almost not exist with the CULT Extreme line and a 20-25% elasticity allow to control a hooked fish in every situation. Its mattfinished olive colour virtually vanishes in an underwater ambience.

### CULT DEEP PURPLE

This special new monofilament is designed to meet all the demands of carp fishing. The nylon core, sheathed with fluorocarbon, causes the line to sink as well as preventing water absorption. The sheathing also protects against wear and provides controlled stretch. Thanks to the incredibly smooth surface, the line slides rapidly through the rings free of friction. The distinctive purple adds a visual highlight.

### CULT FLUOROCARBON SNAG LEADER

In response to demand, Climax has produced the 100% fluorocarbon Snag Leader. Enormously hardwearing, even when fished over shells or sharp stones, it also has low stretch and memory properties. A leader for really tough conditions.

### Cult Carpline ShockLeader

The ultimate shock leader when it comes to casting long distance. Its well balanced stretch perfectly absorbs the casting energy so the mainline will not break even when casting at maximum load. The refined surface makes for excellent abrasion resistance – perfect when fishing tricky waters with mussel banks or other tough obstacles.

lbs	30	40	
kg	14,5	19,5	
m	10	10	

**SNAKEBRAID**  
Climax Snakebraid helps to preserve nature, clearly improves existing products and makes fishing more efficient and sustainable. The non-toxic leader outperforms traditional leadcore in suppleness, abrasion resistance and camouflage. Thanks to its high density fibres, Climax Snakebraid is

extremely heavy and can fully abstain from using lead to make it sink. The absence of the toxic metal boosts the suppleness and with its highly effective camouflage patterns it hides perfectly in the ground. Climax Snakebraid splices easily and can be perfectly knotted as well. It is available in WEED, SILT and Gravel patterns.

lbs	20	30	
kg	9,1	14,5	
m	20	20	

**SKIN BRAID**  
Use CULT Skin Braid to make the most inconspicuous anti-tangle rigs. Coated with a removable anti-tangle skin this line is a must have in every tackle box. Simply remove the coating to expose the extra supple braid that perfectly blends in with all possible lake beds.

lbs	20	30	
kg	9,1	14,5	
m	20	20	

**HUNTERS BRAID HEAVY**  
The special surface coating of this soft, very close-knit braid combines with its hard-wearing qualities to easily cut through seagrass and other vegetation. A newly-developed, heavy fibre has been incorporated into the braid to achieve a rapid sink rate and ensures the cast always lies flat on the bottom.

Ø	0,25	0,30	0,45	
kg	12,0	15,0	20,0	
lbs	25	30	40	

**HUNTERS BRAID**  
Thanks to its special fibre treatment and camouflage surface sealing, this leader is especially abrasion resistant and made for waters with rocky grounds, mussel beds and stubborn roots.

lbs	15	25	35	45
kg	7	12	15	22
m	10	10	10	10

#### LEAD CORE – SUPER SUPPLE

This lead core material features an abrasion-resistant and easily spliceable sheath, is extremely heavy and virtually disappears on the lake or river bed. It is ideal for both, inline and bolt rigs.

Ø	0,14	0,18	0,24	0,30	0,35
kg	10	15	20	25	30

#### DURAMAX LEADER

Extremely smooth and 5x more abrasion resistant shock leader made of braided DYNEEMA®-Fibre to relieve the main line during far casts. A perfect combination with Climax CULT EXTREME! Length: 25 m

kg	7	10	15
lbs	15	20	30
m	20	20	20

#### XPANDA LINK

Made from fluorocarbon, this special braid expands under pressure to create a kind of “rubber band” effect, making it difficult for a fish to throw the hook when being played. The braid is very soft and the weight of the fibres ensures perfect presentation on the bottom.

Ø	0,40	0,50	0,60
lbs	15	25	35
m	20	20	20

#### FLEXI CHOD

The Flexi Chod Hooklink is just right for chod-rig presenting. Its extreme rigidity virtually excludes the risk of tangles during casting. The material used in the Hooklink allows it to be flexed and shaped.

Ø	0,35	0,40	0,45	0,50
lbs	15	20	25	30
m	20	20	20	20

#### CHIMERA MONO

The fluorocarbon used in Chimera Mono making it almost invisible. Thanks to the special treatment of the material, the fish suspects nothing when it takes the bait. The Hooklink is extremely smooth, an excellent sinker, has next to no expansion.

## LEAD CORE LEADER – ALL PURPOSE

This abrasion-resistant lead core leader is heavy and virtually disappears on the lake or river bed. Equipped with a loop on one end and a swivel on the other end, it is suitable for both, inline and bolt rigs. The perfect choice for muddy water beds and wary fish. Combine with Climax CULT Hunters Braid as hooklink!

## LEAD CORE LEADER – SAFETY BOLT CLIP

This ready-made bolt rig features an abrasion resistant sheath for difficult waters. Extra heavy and supple, it sinks quickly and virtually disappears on the lake or river bed. All materials used are of highest quality and perform to the maximum even after long-term use.

## TUNGSTEN LEADER

This ready-made highquality bolt rig features super fast-sinking Tungsten coating, which is non-toxic and blends in naturally with the lake or river bed. Its pliable skin is extra fish-friendly and in case of line breakage the Bolt Clip releases the lead when getting caught by obstacles. All materials are of the highest standard and will continue to produce the best results even after long-term use. Content: 1 piece/pack • Color: dark olive-green

## TUNGSTEN LEADER

This non-toxic, top-class carp leader features a fast-sinking Tungsten coating and perfectly blends into the lake or river bed. With a very smooth surface, it is suitable for both inline and bolt rigs. The ideal choice when it comes to muddy waters and shy fish. Content: 1 piece/pack • Color: dark olive-green

## CLEAR LEADER

Featuring an extra-smooth, soft coat, this top-quality clear leader sinks and virtually vanishes on the lake or river bed. It is suitable for both in-line and bolt rigs. This leader is a „musthave“ in your tackle box and the perfect choice for clear water and shy fish. Content: 1 piece/pack • Color: transparent

cm 130

#### TUNGSTEN CHOD RIG

This ready-made top-class rig meets the highest demands of the modern carp angler. The heavy tungsten coating slightly sinks into the weed and unsuspectingly presents pop-up boilies on top. The lead is far enough not to drag and hide the boilie into the lake bed. Non-Toxic and fish-friendly. Content: 1 piece/pack • Color: dark olive-green

cm 60

#### HELICOPTER RIG

This ready-made, top-class helicopter rig has unique aerodynamic properties to give you a decisive advantage for casting extreme distances. The free rotation device ensures that your rig never gets tangled. The fast-sinking Tungsten coating is extremely fishfriendly and non-toxic. Content: 1 piece/pack • Color: black

Ø 1,6 2,4  
m 1 1

#### SHRINK TUBE

Careful steaming of the tube will shrink it by 50%. This makes it ideal for various rigs such as line-aligner rigs and many other. Should not be exposed to flame as this could harm the material. Color: transparent, black

#### SPLICING NEEDLE – QUICK CHANGE

The perfect tool for making knotless connections or rigs using Leadcore, Climax Dyna Splice or other material. Ask your dealer for a Climax refill pack if you run out of needles. Content: 1 piece/pack + 4 spare needles

#### SPLICING NEEDLE REFILL PACK

Refill pack for CULT Splicing Needle - Quick Change (6 Pieces). Content: 6 pieces/pack

# CULT Catfish

The braided rig line is 5x more abrasion resistant than other braids, all swivels come with ball bearings to fit the toughest needs of angling catfish and all rigs feature highly break-proof "Eagle Claw" hooks specially processed by the 'Needle-Tip' treatment for an extra sharp point.

## CATFISH FLOAT SET - STIFF TUBE

This complete set contains a stiff tube, a float, swivels and a highly abrasion resistant Catfish Leader Braid. This rig is perfect for lakes and slow currents since the stiff tube prevents the bait from getting tangled with the mainline or weak link. After shortening the tube to the desired length, thread the leader, make a loop and attach the mainline swivel. The second swivel is ready fixed and perfectly fits with our Leech- or Bait Fish Rigs.

Ø	0,90	1,00	1,30	
kg	80	100	130	
cm	150	150	150	
gr	30	60	150	

## CATFISH FLOAT SET - STIFF MONO

This system works similar to the Tube Rig but features a stiff and abrasion resistant anti-tangle co-polymer replacing the tube. The mainline swivel allows to easily connect a weak link to a stone. Best performance will be achieved when combining this set with our Leech- or Bait Fish Rigs.

Ø	0,75	1,05	1,20	
kg	40	80	100	
cm	60	60	60	

## CATFISH SPINNING RIG - MONOFILAMENT

This monofilament companion to the braided spinning rig is tied on a special co-polymer for extra abrasion resistance, transparency and finally to prevent catfish from extreme injury. Additionally the stiff leader avoids the bait to get tangled with the mainline.

Ø	1,60	1,60		
kg	180	180		
cm	150	150		
gr	60	150		

## CATFISH SPINNING RIG - BRAIDED

The perfect length for fishing lures such as Wobblers, Spoons or Shads. This first-class rig features maximum abrasion resistance and best accessories available.

Ø	0,90	1,30		
kg	80	130		
cm	60	60		

## CATFISH PELLET/EAL HAIR RIG

Featuring a Latex coated Eagle-Claw hook this rig tributes to the extreme Metal sensitivity of catfish. The interlaced hair rig is perfect for fishing with Pellets or Eel. The generous length allows to individually customise the rig.

Ø	1,30			
kg	130			
cm	110			
single hook	9/0			

## CATFISH FLOAT RIG FOR USING BAIT FISH

This particular rig is ready made and just needs to be fixed to your float – best combination with Climax Float Sets.

Ø	1,30			
kg	130			
cm	40			
treble hook	6/0			
single hook	9/0			

## CATFISH LEECH RIG

Ready made to be fixed to a float or lead this rig features a treble hook for rigging leech or squid. The razor sharp single hook is at extra short distance and so virtually hides inside the leech – best combination with Climax Float Sets.

Ø	0,90	1,00		
kg	80	90		
cm	30	30		
treble hook	3/0	4/0		
single hook	6/0	7/0		

## CATFISH BUOY/DRIFT RIG FOR USING BAIT FISH

Extra long leader and large hook for buoy fishing – long enough for customizing length.

Ø	1,30			
kg	130			
cm	150			
treble hook	6/0			
single hook	9/0			

### CLIMAX CATFISH X-CAST

This catfish spinning line has been specially developed and tested under extreme conditions. The special sealing process, which has been tested by neutral laboratories, makes this line not just smooth as a mono-filament line, but it is also more resistant to abrasion than any comparable braided line. This is the ideal fishing line for waters plagued by mussel beds and sharp stones, a line that pros can trust! Color: red-brown

Ø	0,28	0,39			
kg	25	40			

### CLIMAX CATFISH LEADER

We have utilised the same production process as used in CATFISH X-CAST to develop this leader material out of abrasion resistant DYNEEMA®-Fibres. It remains very supple – for perfect bait presentation – and is very easy to work with. The durability of this leader is extremely high.

Color: grey, yellow

Ø	1,00	1,30			
kg	100	135			

### CLIMAX CATFISH LEADER Hard Mono

The special hardened surface of this leader makes it is resistant to the brush-like teeth of the catfish, as well as to other sharp-edged obstacles. The leader also has very little expansion, which ensures direct contact with the fish. The rigidity of the material prevents tangles when casting and when on the bottom. Here is the perfect leader for catching even the most cautious of catfish.

Ø	0,90	1,05	1,20		
kg	60	80	100		

### CLIMAX CATFISH LEADER Soft Mono

Our new Special Leader for 'tough customer' catfish is very supple and can be easily knotted. The surface structure provides reliable protection against wear and gives it that extra toughness needed when playing cats. Minimal expansion ensures direct contact with the fish. The leader also boasts excellent load bearing qualities.

Ø	1,00	1,20			
kg	54	70			

### CLIMAX CATFISH STRONG

Developed for one of the strongest freshwater fish in the world, the Catfish Strong displays its strength under the hardest conditions: The extremely tight and round, 100% DYNEEMA®-Fibres braided line achieves 5 times higher abrasion resistance thanks to the multiple coating developed exclusively by us. Rocks, mussels, roots or limbs cannot harm this line and with its white color, it ensures good visibility. Whether its buoy fishing or bottom rigging, Catfish Strong can be trusted upon. Color: brown, white

Ø	0,40	0,50	0,60	0,75	0,92
kg	40	50	60	75	80

The **CLIMAX catfish** program has earned itself an excellent reputation right throughout Europe's catfish centres. Whether in Italy, Spain, France or Germany many leading anglers trust **CLIMAX CULT catfish line**, their success proves them right.

# „Haruna Seamaster“

We offer sea anglers an innovative all-in-one package with this all encompassing saltwater program that suits our competent dealers and customers in the area of deep sea fishing. Breaking strain, elasticity, abrasion resistance and precision are harmonized through the most modern technology in monofilament and multifilament line manufacturing.

## HARUNA SEAMASTER LEADER

This exclusive leader material is capable of an enormous breaking strain – 95 kg with just 1.20 mm diameter – and nevertheless does not have problems with knots. Whether a self-knotted paternoster or a deep sea leader, you can completely rely on this monofilament. Color: transparent

Ø	0,60	0,70	0,80	0,90	1,00
kg	24,0	32,0	42,0	51,0	68,0
Ø	1,20	1,40			
kg	95,0	120			

## CLIMAX WIND-ON LEADER

The perfect leader - ready to fish! CLIMAX WIND ON LEADERS meet the toughest requirements of the world's best off shore competition anglers. They are easy to use, withstand the strongest fights and slip back easily through the tip guide when playing fish close to the boat for safer landing or releasing fish. Armed with CLIMAX FLUOROCARBON the Wind-On Leader is perfect for frequently fished waters whereas CLIMAX HARD LEADER virtually boosts the leaders breaking strain and is the right choice for real big fish... both are incredible abrasion resistant and durable. Make your choice!

### Fluorocarbon

## CLIMAX SURF-LINE

Aerodynamic tapered line with color coding for extreme distances. You will achieve greater distances with the aerodynamic taper of this surf line than you would with a parallel line. It is effectively protected from sand, rocks and mussels by a special surface coating. In order to better estimate casting distance, the lines entire length is four-colored contrasted. We also offer the tapered shock leaders separately at a total length of 15 meters and at five pieces per spool.

Knotless tapered line 220 m, Color: 4 changing colors and transparent taper

## HARUNA SEAMASTER IGFA QUALITY

This monofilament Big Game line meets 100% of the IGFA (International Game Fish Association) standards on the precise calibration of international competition line and catches unbelievably good as well! Ask the pros! Attributes: • Exact calibration according to IGFA Standard • Regulated elasticity, for strong hooking performance and buffer when playing the fish • Optimal color for lowest possible under water visibility  
Color: salmon pink

lbs	12	16	20	30	50
lbs	80	130			

## HARUNA PLANER BOARD LINE

Finally a high-end professional Planer Board Line made from 100% Dyneema®. This very strong and highly abrasion resistant line has an extremely smooth surface – perfect for using Planer boards all over the world.  
Color: orange

Ø	1,30	1,60			
kg	130	175			

## BRAIDED CLIMAX DACRON

The classic, DACRON, was the worldwide leader in braided fishing line for years. Today, it is an economical alternative to modern lines made DYNEEMA®-Fibres. The tightly braided line is made up of 12 up to 16 strands of Polyester; it has low

elasticity and high breaking strain. Its main purpose is for catching big game fish in saltwater.  
Color: white with green dots

lbs	12	20	30	50	80	130

### HARUNA SEAMASTER MONO

This special Mono for all types of saltwater fishing has a surface structure, fitted to all of these special requirements, which effectively prevents line damage caused by salt crystal. Thanks to low elasticity and high abrasion resistance, this line is ideal for pirk fishing and suitable for trolling. Color: light-blue

Ø	0,30	0,35	0,40	0,50	0,60
kg	6,3	7,9	11,2	16,0	21,4

Ø	0,70	0,80	1,00	1,20
kg	27,5	36,0	51,0	66,0

### HARUNA SEAMASTER HARD LEADER

This leader material has been developed, through its special hardening, for the roughest fishing in deep sea, ledges, coral and mussel reefs. It sticks stiffly out from the main line and holds the hook in the correct position. With such a high breaking strain (180 kg at just 1.60 mm diameter), even a Halibut of 150 kg would not be a problem. Haruna Seamaster Hard Leader is even successfully used in professional fishing and valued for its transparency. Attributes:

- Ideal also for professional sea fishing

Color: light-grey

Ø	0,60	0,75	0,90	1,05	1,20
kg	30,0	42,0	60,0	80,0	100

Ø	1,45	1,60
kg	150	180

### HARUNA SEAMASTER FLUOROCARBON

This leader material is almost invisible for fish, thanks to a light refraction index that is almost that of water. The leader sinks 3x faster than leaders made of nylon, it is UV-resistant, resistant to cold and waterproof, so that the original breaking strain remains the same even after hours of fishing. The perfect leader for frightened fish or over-fished waters.

Color: transparent

Ø	0,40	0,50	0,60	0,70	0,80
kg	10,0	14,0	17,0	20,0	24,0

Ø	0,90	1,00	1,20	1,30	1,50
kg	30,0	40,0	50,0	68,0	90,0

### BRAIDED – HARUNA SEAMASTER BRAID

This braid is the best saltwater line we know, with extremely tight and round braiding and complex special coating that protects against abrasion and salt crystal. With low friction coefficient, similar to a monofilament, this line has proven an extraordinary reliability in the Norwegian deep sea or in the Caribbean. Color: yellow

Ø	0,20	0,25	0,28	0,30	0,35
kg	15,0	17,0	23,0	29,0	34,0

Ø	0,40	0,50	0,60
kg	36,0	54,0	72,0

### HARUNA SEAMASTER BRAID „DISTANCE“

Our popular and well proven high-performance braid for toughest saltwater conditions now features a precise scale for depth control. Each 10 meters five recurring and broad visible color marks help to precisely measure the depth you currently

fish. A smooth surface, its tight pix count, extreme abrasion resistance and excellent knot strength make this line your most reliable companion fishing in challenging offshore conditions. Color: yellow

Ø	0,20	0,25	0,30	0,35	0,40
kg	15,0	17,0	25,0	30,0	33,0

Ø 0,90mm 51 kg 460 cm

## REDFISH RIG

The redfish rig was designed so that fitting the seven circle hooks at different distances from each other allows specific targeting of redfish shoals at greater depths. The twisters exert an unusually powerful attraction to redfish, and result in an excellent bite rate. In addition, the transparent sheaths on the side arms, along with the mini-floats, protect against twists and sharp teeth.

Ø 1,00 mm 68 kg 175 cm

## LING-RIG

Designed for catching large ling, this brand new rig replaces two single hooks with one large treble, and is fished with a floating bait – either a bait fish or a rubber fish.

Ø 1,00 mm 68 kg 175 cm

## LING-RIG

Designed for catching large ling, this brand new rig replaces two single hooks with one large treble, and is fished with a floating bait – either a bait fish or a rubber fish.

Ø 0,50 mm 20 kg 120 cm

## FLATFISH RIG

This natural bait rig is ideal for boat fishing for plaice, flounder and other species. The spinner in front of the bait is particularly attractive to flatfish, while the rotation is a real 'crowd puller' that will produce a lot more fish. It works best with herring or mackerel residue, but shrimps or prawns are also a good choice of bait.

## HARUNA SEAMASTER

Developed by specialists for real northern sea professionals. Every rig is the creation of many years' careful thought and design by the author of Kutter & Küste and Sportex Team angler Sebastian Rose. Each individual item has been elaborately tested and optimised during Sebastian's many fishing trips and guided fishing tours in Norway. The result is a sophisticated range of rigs refined in every detail. Huge numbers of excellent catches during the rigs' testing phase bear witness to their excellent catching qualities. These rigs make exclusive use of the tried and trusted Climax Haruna Seamaster lines, made of high strength monofilament material for all kinds of saltwater fishing. They are matched with top quality VMC hooks.

## SNATCH

SEA JIG

Ø 1,00 mm 68 kg 165 cm

## HALIBUT ASSEMBLY WITH NATURAL BAIT

This natural bait rig for large halibut features a thin wire fitted to the single large hook which allows for optimum attachment of the fish fillet. A transparent sheath prevents twisting and protects the line. The large spinner in front of the bait is particularly attractive to halibut, the rotation producing many more bites.

Ø 1,00 mm 68 kg 80 + 50 cm

## HALIBUT ASSEMBLY WITH FLOUNDER SPOON FEATURE

Big halibut are the target for this dual function flounder spoon rig. This assembly allows for fishing either with a "flounder bait" or a fish fillet which, when combined with a flounder spoon, will produce a lot more bites than conventional bait fishing alone.

Ø 0,90 mm 51 kg 390 cm

## HAKE RIG

This rig spells success for hake and shellfish. These species are happiest when close to the sea bed so the rig has been designed extra long. The self-lighting sheaths protect the rig from sharp teeth, as well as attracting large numbers of fish. The rotating spinners and the octopus in front of the bait really pull in the target fish and ensure a high bite rate.

# Climax Tools

We worked with an American tooling specialist to create this series of high quality tools. Many patents such as the "Power Jaws" along with uncompromising workmanship and materials make this range exclusive. For example, the very best stainless steel is utilized in making the pliers and scissors. These tools are certainly going to last a long time.

## LIGHTED SUPER CLIP

Bright White LED illuminates in any Light  
Features: • Embedded hook file on the bottomside of the nipper provides convenient hook sharpening.

- High quality honing material will sharpen the largest hooks and last a long time.
- Includes a tiny, white high intensity L.E.D. light for illumination. Sealed, waterproof light focuses through the stainless steel cutting edges of the nipper, illuminating the eye of the hook or other items. Very helpful in any light.

Art. No. 100502 - LIGHTED Super Clip

## SUPER CLIP

Like Lighted Super Clip but without LED light. Art. No. 100501 - Super Clip

## OPEN LOOP

Open loop handle for easy use with gloves.

## FISH-GUARD

Predator-Forceps and Scissors – 22 cm

- stainless steel combo tool with serrated scissors
- Hardened stainless steel scissors with micro serrated edges cut monofilaments and braids cleanly and quickly.

- Combination of ribbed and smooth jaw surfaces hold large and small hooks securely. Patented "Power jaws" provide the clamping power of pliers!

Art. No. 100523 Fish Guard - 22 cm (black)

## FISH-GUARD

Forceps and Scissors – 14 cm

Features:

- stainless steel combo tool with serrated scissors
- Hardened stainless steel scissors with micro serrated edges cut monofilaments and braids cleanly and quickly.

Art. No. 100521 Fish Guard - 14 cm (black)

## FISH-GUARD Curved forceps

- Curved stainless steel jaws make handling and removing smaller hooks easy.
  - 5" stainless steel forceps aid in holding, de-barbing and removing hooks.
  - Combination of ribbed and smooth jaw surface holds large and small hooks firmly.
- Art. No. 100522 Fish Guard curved (black)

## FISH-GUARD

Forceps – 13 cm, Features: • stainless steel forceps aid in holding, de-barbing and removing hooks. • Great for crimping split shot and other weights • Combination of ribbed and smooth jaw surfaces hold large and small hooks.

Art. No. 100520 - Fish Guard 13 cm (black)

## WONDER TOWEL

The Wonder TOWEL is a small sealed tablet that when contacted with moisture grows into a full size hand towel. It is extremely durable and reusable. The towels have no odor and are safe for all applications. Eight (8) sealed tablets come in each package  
Art. No. 100513 Wonder Towel

## HATLIGHT (LED Lamp)

Clip-on LED head focuses light where you need it. Low profile design won't block your view.

- Clear polycarbonate clip works on all hats and is virtually indestructible
- Removable light module doubles as a hand held flashlight

**MINI CLIP in a fishbowl, 36 pcs.**  
Handy stainless steel line clip

## Climax Base-Cap

Modern cut, grey base-cap with Climax embroidery.

Material: 100% cotton

## Climax Polo Shirt

Functional polo-shirt with embroidered Climax logo on front and back. Color-coordinated collar and cuffs as well as a 2-button tab.

Material 100% cotton

Available sizes: M,L,XL,XXL

## MULTI LINK

Universal attachment system holds hats, jackets, gloves, keys and many other items. Works on garments, vests, backpacks, luggage, belt loops, „D“ rings and more.  
Art. No. 100511 - Multi Link

## TACKLE BOX (magnetic)

This high quality, injection molded box holds hooks, swivels, jigs and other tackle items conveniently on the chest. It opens with one hand for added convenience.

- Strong magnetic plate prevents hooks and swivels from becoming dislodged and lost
- Art. No. 100530 Tackle Box (Magnetic)

## TOOL BAND

This is a unique attachment device that extends to over 36" (1m) and always recoils to its original form. The swivel clip rotates 360° for added flexibility. Hold all your forceps and other tools securely.  
Art. No. 100512 Tool Band
